

CUSTOM TREATMENT REGIMES OF ALL TYPES CAN BE DEVELOPED TO MEET THE INDIVIDUAL NEEDS OF YOUR CLIENTS.

Great skin starts here...

Be a part of the fastest growing trend in the professional skincare industry.

Harness the power of light, and energize your bottom line.

| BLUE LIGHT for Purifying and Antibacterial |

Blue light will be used for treatment of mild and moderate acne secondary to staph, yeast and fungal infections. It is beneficial in addressing certain superficial skin cancers as well as treatment of warts and other viral skin problems.

Before

After

| GREEN LIGHT for Skin Discoloration and Acne |

Green light is calming and is shown to have properties and assists with the treatment of acne. Photo dissemination generates healing oxygen. It is well suited to darker and thicker skin that blue light cannot reach.

| VIOLET LIGHT for Regeneration |

Violet is called the “low level Blue” in studies related to acne light therapy. It is particularly effective against acne vulgaris and enables the skin to encourage cell growth.

| YELLOW LIGHT for Toning and Redness Treatment |

The yellow light tones and strengthens muscles under the epidermis, brings tightness back, aids in the anti-aging process. It also reduces redness, swelling and inflammation such as rosacea, sunburn and radiation burns.

| RED LIGHT for Rejuvenation |

Red light therapy fills in small wrinkles by repairing damaged collagen. Increased collagen production takes place in a period of 8-10 weeks of treatment, twice a week. Aging skin will be brightened by evening out the skin tone and addressing age spots.
